

General Purpose Full Vector Inverter

VDI100

■ ■ ■ ■ Start-up and Installation Manual

GEFRAN

Information about this manual

The VDI100 product is an inverter designed to control a three-phase induction motor and permanent magnet. Please read this manual carefully to ensure correct operation, safety and to become familiar with the inverter functions.

The VDI100 inverter is an electrical / electronic product and must be installed and handled by qualified service personnel.

Improper handling may result in incorrect operation, shorter life cycle, or failure of this product as well as the motor.

All VDI100 documentation is subject to change without notice. Be sure to obtain the latest editions for use or visit our website at http://www.gefran.com/en/product_categories/93-motion-control

Available Documentation:

1. VDI100 Start-up and Installation Manual
2. VDI100 Instruction Manual

Ensure you have sound knowledge of the device and familiarize yourself with all safety information and precautions before proceeding to operate the inverter.

Ensure you have sound knowledge of the inverter and familiarize yourself with all safety information and precautions before proceeding to operate the inverter.

Software version

This manual is updated according the software version V 1.20

The identification number of the software version is indicated on the identification plate of the drive or can be checked with the **par. 13.01**.

General information

Note !

In industry, the terms "Inverter", "Regulator" and "Drive" are sometimes interchanged. In this document, the term "Drive" will be used.

PG (Pulse Generator) =Encoder

Before using the product, read the safety instruction section carefully.

Keep the manual in a safe place and available to engineering and installation personnel during the product functioning period.

Gefran S.p.A has the right to modify products, data and dimensions without notice. The data can only be used for the product description and they can not be understood as legally stated properties.

Thank you for choosing this Gefran product.

We will be glad to receive any possible information which could help us improving this manual. The e-mail address is the following: techdoc@gefran.com.

1. Safety Precautions

Preface

- Ensure you have sound knowledge of the device and familiarize yourself with all safety information and precautions before proceeding to operate the inverter.
- Please pay close attention to the safety precautions indicated by the warning and caution symbol.

Préface

- Vérifiez que vous avez une bonne connaissance de l'entraînement et de vous familiariser avec les consignes de sécurité et les précautions avant de procéder à fonctionner le lecteur.
- Prêter attention aux consignes de sécurité indiquées par l'avertissement (Warning) et symbole Attention (Caution).

1.1. Symbols used in the manual

Warning

Indicates a procedure, condition, or statement that, if not strictly observed, could result in personal injury or death.
Indique le mode d'utilisation, la procédure et la condition d'exploitation. Si ces consignes ne sont pas strictement respectées, il y a des risques de blessures corporelles ou de mort.

Caution

Indicates a procedure, condition, or statement that, if not strictly observed, could result in damage to or destruction of equipment.
Indique et le mode d'utilisation, la procédure et la condition d'exploitation. Si ces consignes ne sont pas strictement respectées, il y a des risques de détérioration ou de destruction des appareils.

Important

Indicates that the presence of electrostatic discharge could damage the appliance. When handling the boards, always wear a grounded bracelet.
Indique que la présence de décharges électrostatiques est susceptible d'endommager l'appareil. Toujours porter un bracelet de mise à la terre lors de la manipulation des cartes.

Indicates a procedure, condition, or statement that should be strictly followed in order to optimize these applications.
Indique le mode d'utilisation, la procédure et la condition d'exploitation. Ces consignes doivent être rigoureusement respectées pour optimiser ces applications.

Note !

Indicates an essential or important procedure, condition, or statement.

Indique un mode d'utilisation, de procédure et de condition d'exploitation essentiels ou importants

1.2. Before Supplying Power to the Inverter / Avant d'alimenter le variateur

Warning

The main circuit must be correctly wired. For three phase supply use input terminals (R/L1, S/L2, T/L3). Terminals U/T1, V/T2, W/T3 must only be used to connect the motor. Connecting the input supply to any of the U/T1, V/T2 or W/T3 terminals will cause damage to the inverter.

Avertissement !

Le circuit principal doit être correctement câblée. Pour l'alimentation triphasée, utiliser les terminaux d'entrée (R/L1, S/L2, T/L3). Les terminaux U/T1, V/T2, W/T3 doivent être exclusivement utilisés pour raccorder le moteur. Le fait de brancher l'alimentation sur l'un des terminaux U/T1, V/T2 ou W/T3 endommagera le variateur.

Caution

- To avoid the front cover from disengaging or other physical damage, do not carry the inverter by its cover. Support the unit by its heat sink when transporting. Improper handling can damage the inverter or injure personnel, and should be avoided.
- To avoid the risk of fire, do not install the inverter on or near flammable objects. Install on nonflammable objects such as metal surfaces.

- If several inverters are placed inside the same control panel, provide adequate ventilation to maintain the temperature below 40°C/104°F (50°C/122°F) without a dust cover) to avoid overheating or fire.
- When removing or installing the digital operator, turn off the power first, and then follow the instructions in this manual to avoid operator error or loss of display caused by faulty connections.

Attention !

- Pour éviter que le couvercle ne se désengage ou de tout autre dommage physique, ne portez pas le lecteur par son couverture. Soutenir le groupe par son dissipateur de chaleur lors du transport. Une mauvaise manipulation peut endommager le lecteur ou blesser le personnel, et doit être évitée.
- Pour éviter que les risques d'incendie, ne pas installer le lecteur sur ou à proximité d'objets inflammables. Installer sur des objets ininflammables comme les surfaces métalliques.
- Si plusieurs variateurs sont logés à l'intérieur d'une même armoire, assurer une bonne ventilation pour maintenir une température inférieure à 40°C/104°F (50°C/122°F) (sans cache-poussière), pour éviter tout risque de surchauffe et d'incendie.
- Lors de la dépose/repose de l'opérateur numérique, couper d'abord l'alimentation puis suivre les instructions ci-contenues pour éviter toute erreur ou perte d'affichage due à des connexions défectueuses..

- This product is sold subject to IEC 61800-3. In a domestic environment this product may cause radio interference in which case the user may need to apply corrective measures.
- Motor over temperature protection is not provided.

Avertissement !

- Ces produit est commercialisé conformément à la norme IEC 61800-3. En milieu résidentiel, ce produit peut provoquer des interférences radio ; dans ce cas, l'utilisateur devra entreprendre des actions correctives.
- La protection contre la sur-température du moteur n'est pas prévue.

1.3. Wiring / Câblage

- Always turn OFF the power supply before attempting inverter installation and wiring of the user terminals.
- Wiring must be performed by a qualified personnel / certified electrician.
- Make sure the inverter is properly grounded. Grounding impedance shall be less than 10Ω.
- Make sure the inverter is properly grounded. It is required to disconnect the ground wire in the control board to avoid the sudden surge causing damage on electronic parts if it is improperly grounded.
- RCD is required to be in compliance with the protection norm of B-type leakage current.
- Please check and test emergency stop circuits after wiring. (Installer is responsible for the correct wiring.)
- Never touch any of the input or output power lines directly or allow any input or output power lines to come in contact with the inverter case.
- Do not perform a dielectric voltage withstand test (megger) on the inverter this will result in inverter damage to the semiconductor components.

Avertissement !

- Coupez toujours l'alimentation électrique avant de procéder à l'installation d'entraînement et le câblage des terminaux utilisateurs.
- Le câblage doit être effectué par un personnel qualifié / électricien certifié.
- Assurez-vous que le lecteur est correctement mis à la terre. Impédance de mise à la terre doit être inférieure à 10Ω.
- Vérifier et tester mes circuits d'arrêt d'urgence après le câblage. (L'Installateur est responsable du câblage.)
- Ne touchez jamais de l'entrée ou de lignes électriques de sortie permettant directement ou toute entrée ou de lignes de puissance de sortie à venir en contact avec le boîtier d'entraînement.
- Ne pas effectuer un test de tenue en tension diélectrique (mégohmmètre) sur le disque dur ou cela va entraîner des dommages de lecture pour les composants semi-conducteurs.

Caution

- The line voltage applied must comply with the inverter's specified input voltage. (See product nameplate section 2.1)
- Connect braking resistor and braking unit to the designated terminals. (See section 3.10)
- Do not connect a braking resistor directly to the DC terminals P (+) and N (-), otherwise fire may result.
- Use wire gauge recommendations and torque specifications. (See Wire Gauge and Torque Specification in section 3.6)
- Never connect input power to the inverter output terminals U/T1, V/T2, W/T3.
- Do not connect a contactor or switch in series with the inverter and the motor.
- Do not connect a power factor correction capacitor or surge suppressor to the inverter output.
- Ensure the interference generated by the inverter and motor does not affect peripheral devices.

Attention !

- *La tension d'alimentation appliquée doit se conformer à la tension d'entrée spécifiée par le lecteur. (Voir la section signalétique du produit, ch. 2.1)*
- *Raccorder la résistance de freinage et de l'unité de freinage sur les bornes assignées (Voir ch. 3.10).*
- *Ne pas brancher une résistance de freinage directement sur les bornes CC P (+) et N (-), sinon risque d'incendie.*
- *Utilisez des recommandations de la jauge de fil et les spécifications de couple. (Voir Wire Gauge et la section de spécification de couple, ch. 3.6).*
- *Ne jamais brancher l'alimentation d'entrée aux bornes onduleur de sortie U/T1, V/T2, W/T3.*
- *Ne pas brancher un contacteur ou interrupteur en série avec le variateur et le moteur.*
- *Ne branchez pas un facteur condensateur de correction de puissance ou suppresseur de tension à la sortie du variateur.*
- *S'assurer que l'interférence générée par l'entraînement et le moteur n'a pas d'incidence sur les périphériques.*

Warning

1.4. Before Operation / Avant l'opération

- Make sure the inverter model matches the parameters 13-00.
- Reduce the carrier frequency (parameter 11-01) If the cable from the inverter to the motor is greater than 80 ft (25m). A high-frequency current can be generated by stray capacitance between the cables and result in an overcurrent trip of the inverter, an increase in leakage current, or an inaccurate current readout.
- Be sure to install all covers before turning on power. Do not remove any of the covers while power to the inverter is on, otherwise electric shock may occur.
- Do not operate switches with wet hands, otherwise electric shock may result.
- Do not touch inverter terminals when energized even if inverter has stopped, otherwise electric shock may result.

Avertissement !

- *Assurez-vous que le modèle du variateur correspond aux paramètres 13-00 de notation avant d'alimenter.*
- *Réduire le paramètre 11-01 de la fréquence porteuse si le câble du variateur au moteur est supérieure à 80 pi (25 m). Un courant de haute fréquence peut être générée par la capacité parasite entre les câbles et entraîner un déclenchement de surintensité du variateur, une augmentation du courant ou d'une lecture actuelle inexacte.*
- *Veillez à installer tous les couvercles avant de l'allumer. Ne retirez pas les capots pendant que l'alimentation du lecteur est allumé, un choc électrique peut se produire autrement.*
- *Ne pas actionner d'interrupteurs avec les mains mouillées, un choc électrique pourrait survenir autrement.*
- *Ne touchez pas les bornes d'entraînement lorsqu'il est alimenté, même si le lecteur est arrêté, un choc électrique pourrait survenir autrement.*

1.5. Parameters Setting / Configuration Paramètre

- Do not connect a load to the motor while performing a rotational auto-tune.
- Make sure the motor can freely run and there is sufficient space around the motor when performing a rotational auto-tune.

Attention !

- *Ne branchez pas une charge pour le moteur tout en effectuant un auto-tune.*
- *Assurez-vous que le moteur peut fonctionner librement et il y a suffisamment d'espace autour du moteur lors de l'exécution d'un auto-tune rotation.*

1.6. Operation / Opération

- Be sure to install all covers before turning on power. Do not remove any of the covers while power to the inverter is on, otherwise electric shock may occur.
- Do not connect or disconnect the motor during operation. This will cause the inverter to trip and may cause damage to the inverter.
- Operations may start suddenly if an alarm or fault is reset with a run command active. Confirm that no run command is active upon resetting the alarm or fault, otherwise accidents may occur.
- Do not operate switches with wet hands, otherwise electric shock may result.
- It provides an independent external hardware emergency switch, which emergently shuts down the inverter output in the case of danger.
- If automatic restart after power recovery (parameter 07-00) is enabled, the inverter will start automatically after power is restored.
- Make sure it is safe to operate the inverter and motor before performing a rotational auto-tune.
- Do not touch inverter terminals when energized even if inverter has stopped, otherwise electric shock may result.
- Do not check signals on circuit boards while the inverter is running.
- After the power is turned off, the cooling fan may continue to run for some time.

Avertissement !

- *Veillez à installer tous les couvercles avant de l'allumer. Ne retirez pas les capots pendant que l'alimentation du lecteur est allumé, un choc électrique peut se produire autrement.*
- *Ne pas brancher ou débrancher le moteur pendant le fonctionnement. Le variateur pourra se déclencher et ainsi endommager le lecteur.*
- *Les opérations peuvent commencer soudainement si une alarme ou un défaut est réarmé avec un ordre de marche active. Assurez-vous qu'un ordre de marche est actif lors de la réinitialisation de l'alarme ou de défaut, autrement des accidents peuvent se produire.*
- *Ne pas actionner d'interrupteurs avec les mains mouillées, un choc électrique pourrait survenir .*
- *Un interrupteur d'urgence externe indépendant est fourni, qui s'arrête en urgence vers le bas la sortie de l'onduleur en cas de danger.*
- *Si le redémarrage automatique après une récupération d'énergie est activée (par 07-00), le variateur démarra automatiquement après le rétablissement du courant.*
- *Assurez-vous qu'il est sûr de faire fonctionner le variateur et le moteur avant d'effectuer un auto-tune rotation.*
- *Ne touchez pas les bornes d'entraînement lorsqu'il est alimenté même si l'onduleur s'est arrêté, un choc électrique pourrait survenir .*
- *Ne pas contrôler les signaux sur les circuits pendant que le lecteur est en marche.*
- *Après la mise hors tension, le ventilateur de refroidissement peut continuer à fonctionner pendant un certain temps.*

Caution

- Do not touch heat-generating components such as heat sinks and braking resistors.
- Carefully check the performance of motor or machine before operating at high speed, otherwise Injury may result.
- Note the parameter settings related to the braking unit when applicable.
- Do not use the inverter braking function for mechanical holding, otherwise injury may result.
- Do not check signals on circuit boards while the inverter is running.

Attention !

- *Ne touchez pas les composants générant de la chaleur tels que radiateurs et des résistances de freinage.*
- *Vérifiez soigneusement la performance du moteur ou de la machine avant d'utiliser à grande vitesse, sous peine de blessure.*
- *Notez les réglages des paramètres liés à l'unité de freinage lorsque applicable.*
- *Ne pas utiliser la fonction de freinage d'entraînement pour un maintien mécanique, sous peine de blessure.*
- *Ne pas contrôler les signaux sur les circuits pendant que le lecteur est en marche.*

Warning

1.7. Maintenance, Inspection and Replacement / Entretien, Inspection et remplacement

- Wait a minimum of five minutes after power has been turned OFF before starting an inspection. Also confirm that the charge light is OFF and that the DC bus voltage has dropped below 25Vdc.
- Never touch high voltage terminals in the inverter.
- Make sure power to the inverter is disconnected before disassembling the inverter.
- Only authorized personnel should perform maintenance, inspection, and replacement operations. (Take off metal jewelry such as watches and rings and use insulated tools.)

Avertissement !

- *Attendre un minimum de 5 minutes après que l'alimentation a été débranchée avant de commencer une inspection. Vérifiez également que le voyant de charge est éteint et que la tension du bus cc a chuté au-dessous de 25Vdc.*
- *Ne jamais toucher les bornes à haute tension dans le lecteur.*
- *Assurez-vous que l'alimentation du lecteur est débranché avant de démonter le lecteur.*
- *Seul le personnel autorisé peuvent faire l'entretien, l'inspection et les opérations de remplacement. (Enlevez les bijoux en métal tels que les montres et les bagues et utiliser des outils isolés.).*

Caution

- The Inverter can be used in an environment with a temperature range from 14°~104 (140) °F (-10~+40 (60) °C) and relative humidity of 95% non-condensing.
- The inverter must be operated in a dust, gas, mist and moisture free environment.

Attention !

- *Le variateur peut être utilisé dans un environnement avec une gamme de température allant de 14 ° -104 ° F (10-40 ° C) et l'humidité relative de 95% sans condensation.*
- *Le variateur doit être utilisé dans un environnement sans poussière, gaz, vapeur et humidité.*

Caution

1.8. Disposal of the Inverter / Mise au rebut du variateur

- Please dispose of this unit with care as an industrial waste and according to your required local regulations.
- The capacitors of inverter main circuit and printed circuit board are considered as hazardous waste and must not be burned.
- The Plastic enclosure and parts of the inverter such as the top cover board will release harmful gases if burned.

Attention !

- *Jeter cet appareil avec soin comme un déchet industriel et selon les réglementations locales nécessaires.*
- *Les condensateurs du circuit principal d'entraînement et circuits imprimés sont considérés comme des déchets dangereux et ne doivent pas être brûlés.*
- *L'enveloppe et d'autres éléments en plastique du variateur, tels la plaque de revêtement supérieure, dégagent des fumées toxiques en cas d'incinération.*

Pursuant to Article 26 of Italian Legislative Decree no. 49 of 14 March 2014 “Implementation of Directive 2012/19/EU on waste electrical and electronic equipment (WEEE)”

The symbol showing a crossed-out wheeled bin on equipment or its packaging indicates that the product must be collected separately from other waste at the end of its useful life.

The manufacturer is responsible for organising and managing the separate collection of this piece of equipment at the end of its useful life.

Users wishing to dispose of the equipment must therefore contact the manufacturer to obtain instructions from the same on how to have the equipment collected separately at the end of its useful life.

By collecting the disused equipment separately, it can be recycled, treated or disposed of in an environmentally friendly manner, thus helping to prevent the environment and public health from being affected negatively and enabling reuse and/or recycling of the materials forming the same equipment

Aux termes de l'art. 26 du D.Lgs. n. 49 du 14 mars 2014, n.49 “Transposition de la Directive 2012/19/UE relative aux déchets d'équipements électriques et électroniques (RAEE)”

Le pictogramme de la poubelle barrée, figurant sur l'équipement ou sur son emballage, indique que le produit en fin de vie doit être traité séparément des autres déchets.

Le ramassage sélectif de cet équipement en fin de vie est organisé et géré par le constructeur.

Tout utilisateur qui souhaiterait se débarrasser de l'équipement devra donc contacter le constructeur pour obtenir des informations concernant la méthode adoptée pour permettre le ramassage sélectif de l'équipement en fin de vie.

Un ramassage sélectif correct, en vue de l'acheminement de l'équipement vers des opérations de recyclage, de traitement et de mise au rebut respectueuses de l'environnement, contribue à réduire les impacts potentiellement néfastes sur l'environnement et la santé, outre à favoriser la réutilisation des matériaux/composants dont l'équipement est constitué.

2. Model Description

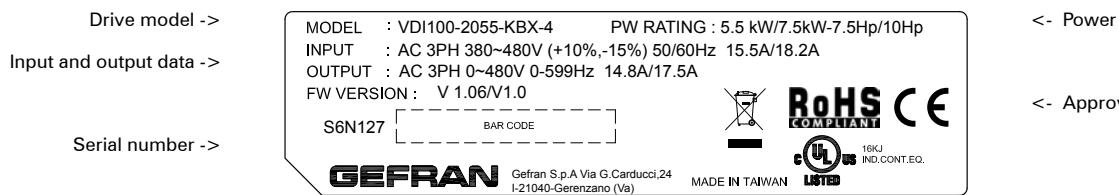

2.1. Nameplate Data

It is essential to verify the VDI100 inverter nameplate and make sure that the VDI100 inverter has the correct rating so it can be used in your application with the proper sized AC motor.

Unpack the VDI100 inverter and check the following:

- (1) The VDI100 inverter and start-up and installation manual are contained in the package.
- (2) The VDI100 inverter has not been damaged during transportation there should be no dents or parts missing.
- (3) The VDI100 inverter is the type you ordered. You can check the type and specifications on the main nameplate.
- (4) Check that the input voltage range meets the input power requirements.
- (5) Ensure that the motor kW (HP) matches the motor rating of the inverter.

HD: Heavy Duty (Constant Torque); ND: Normal Duty (Variable Torque) (1HP = 0.746 kW)

Model Identification

VDI100-XXX-KXX-X-Y	
EMI Filter:	F = included; [Empty] = not included
Rated voltage:	4 = 400 Vac , 3ph
Software:	X = standard
Braking unit:	B = included; X = not included
Keypad:	K = Integrated (LED keypad with 5-digits 7-segment display)
Drive power, in kW	
Mechanical drive sizes	
VDI100 drive series	

2.2. Inverter Models – Motor Power Rating (HD – Heavy Duty)

Voltage	VDI100 Models with filter	VDI100 Models without filter	Motore applicato (HP)	(kW)
3ph, 380~480V +10%/-15% 50/60Hz	VDI100-1007-KBX-4-F	VDI100-1007-KBX-4	1	0.75
	VDI100-1015-KBX-4-F	VDI100-1015-KBX-4	2	1.5
	VDI100-1022-KBX-4-F	VDI100-1022-KBX-4	3	2.2
	VDI100-2037-KBX-4-F	VDI100-2037-KBX-4	5	3.7
	VDI100-2055-KBX-4-F	VDI100-2055-KBX-4	7.5	5.5
	VDI100-3075-KBX-4-F	VDI100-3075-KBX-4	10	7.5
	VDI100-3110-KBX-4-F	VDI100-3110-KBX-4	15	11
	VDI100-4150-KBX-4-F	VDI100-3150-KBX-4	20	15
	VDI100-4185-KBX-4-F	VDI100-4185-KBX-4	25	18.5

	VDI100-5370-KXX-4-F	VDI100-5370-KXX-4	50	37
	VDI100-5450-KXX-4-F	VDI100-5450-KXX-4	60	45

Short Circuit Rating: 5kA

3. Environment and Installation

3.1. Wire Gauges and Tightening Torque

To comply with UL standards, use UL approved copper wires (rated 75° C) and round crimp terminals (UL Listed products) as shown in table below when connecting to the main circuit terminals. Gefran recommends using crimp terminals manufactured by NICHIFU Terminal Industry Co., Ltd and the terminal crimping tool recommended by the manufacturer for crimping terminals and the insulating sleeve.

Wire size mm ² (AWG)	Terminal screw size	Model of the round crimp terminal	Fastening torque kgf.cm (in.lbs)	Model of insulating sleeve	Model of crimp tool
0.75 (18)	M3.5	R1.25-3.5	8.2 to 10 (7.1 to 8.7)	TIC 1.25	NH 1
	M4	R1.25-4	12.2 to 14 (10.4 to 12.1)	TIC 1.25	NH 1

	M16	R80-16	255 to 280 (221 to 243)	TIC 80	NOP 150H

3.2. Wiring Peripheral Power Devices

- After power is shut off to the inverter the capacitors will slowly discharge. Do NOT touch the inverter circuit or replace any components until the "CHARGE" indicator is off.
- Do NOT wire or connect/disconnect internal connectors of the inverter when the inverter is powered up or after power off but the "CHARGE" indicator is on.
- Do NOT connect inverter output U, V and W to the AC power source. This will result in damage to the inverter.
- The inverter must be properly grounded. Use terminal E to connect earth ground and comply with local standards.
- It is required to disconnect the ground wire in the control board if the inverter is not grounded.

- Do NOT perform a dielectric voltage withstand test (Megger) on the inverter this will result in inverter damage to the semiconductor components.
- Do NOT touch any of the components on the inverter control board to prevent damage to the inverter by static electricity.

Caution

- Refer to the recommended wire size table for the appropriate wire to use. The voltage between the power supply and the input terminals of the inverter may not exceed 2%.

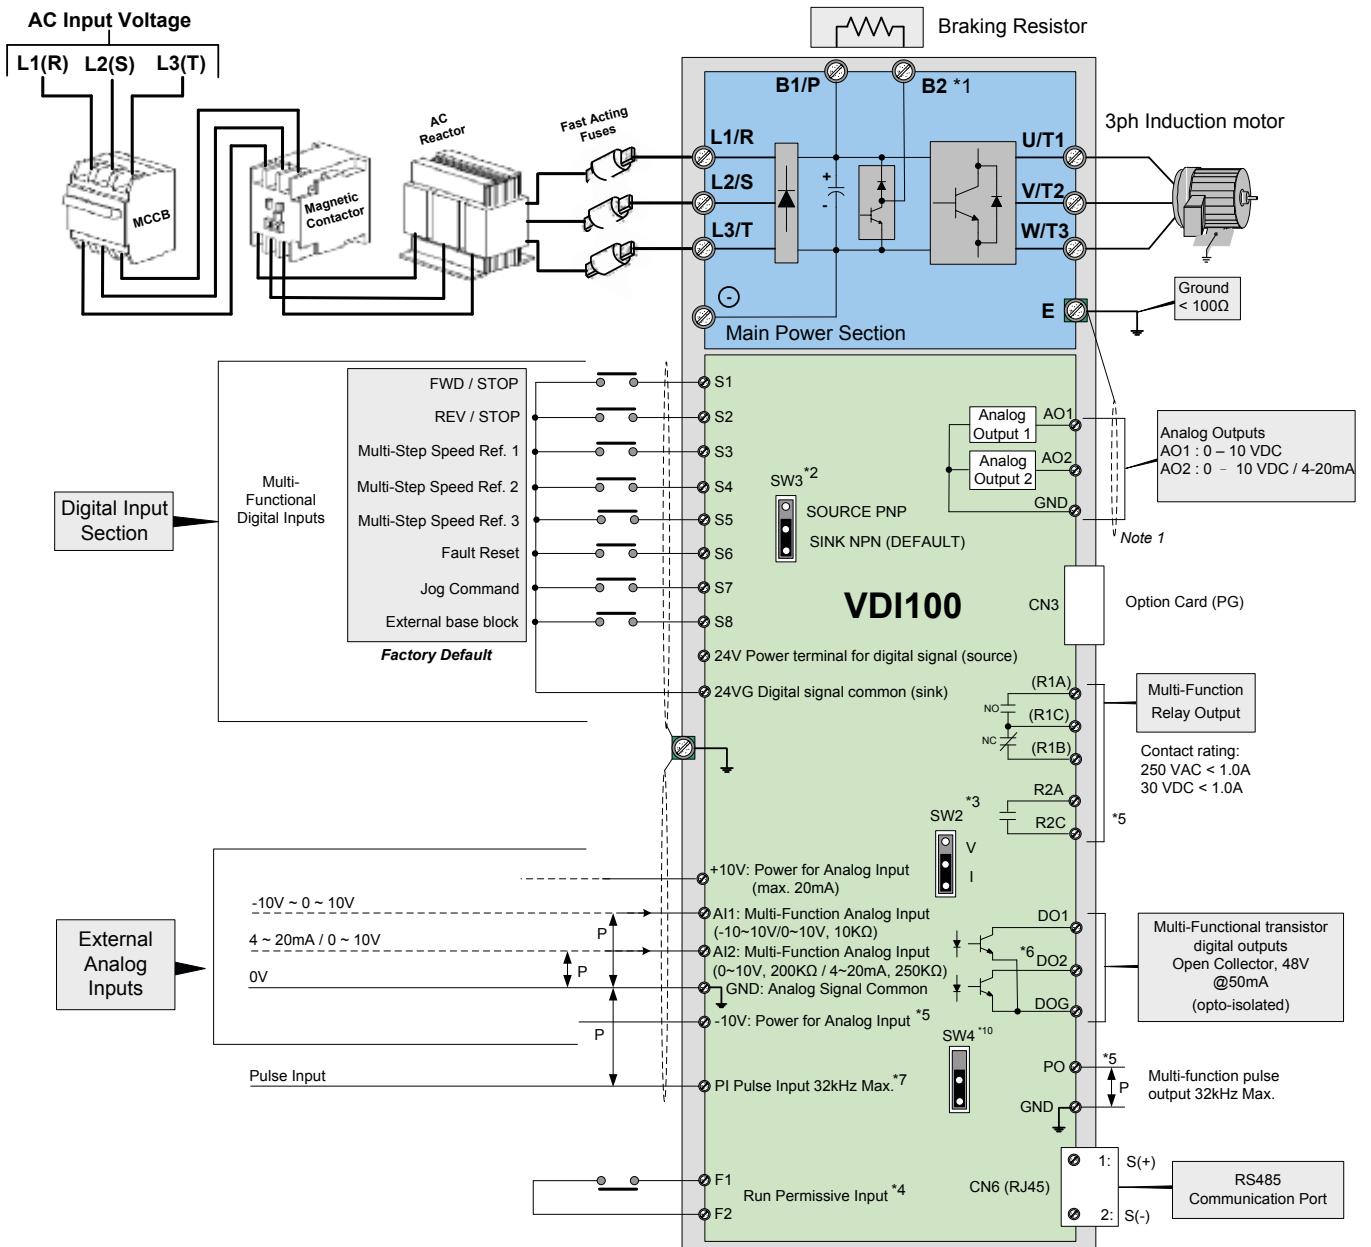

$$\text{Phase-to-phase voltage drop (V)} = \sqrt{3} \times \text{resistance of wire } (\Omega/\text{km}) \times \text{length of line m} \times \text{current} \times 10^{-3}$$

(km=3280 x feet) / (m=3.28 x feet)

- Reduce the carrier frequency (parameter 11-01) If the cable from the inverter to the motor is over 25m (82ft). A high-frequency current can be generated by stray capacitance between the cables and result in an overcurrent trip of the inverter, an increase in leakage current, or an inaccurate current readout.
- To protect peripheral equipment, install fast acting fuses on the input side of the inverter. Refer to section 11.4 for additional information (on VDI100 Instruction Manual).

	<p>Power supply:</p> <p> Make sure the correct voltage is applied to avoid damaging the inverter.</p> <p>Molded-case circuit breaker (MCCB) or fused disconnect:</p> <ul style="list-style-type: none"> • A molded-case circuit breaker or fused disconnect must be installed between the AC source and the inverter that conforms to the rated voltage and current of the inverter to control the power and protect the inverter. • Do not use the circuit breaker as the run/stop switch for the inverter. <p>Ground fault detector / breaker:</p> <ul style="list-style-type: none"> • Install a ground fault breaker to prevent problems caused by current leakage and to protect personnel. Select current range up to 200mA, and action time up to 0.1 second to prevent high frequency failure. <p>Magnetic contactor:</p> <ul style="list-style-type: none"> • Normal operations do not need a magnetic contactor. When performing functions such as external control and auto restart after power failure, or when using a brake controller, install a magnetic contactor. • Do not use the magnetic contactor as the run/stop switch for the inverter. <p>AC line reactor for power quality:</p> <ul style="list-style-type: none"> • When inverters are supplied by a high capacity power source (> 600kVA), an AC reactor can be connected to improve the power factor. <p>Install Fast Acting Fuse:</p> <ul style="list-style-type: none"> • To protect peripheral equipment, install fast acting fuses in accordance with the specifications in section 11.4 (on VDI100 Instruction Manual). <p>Input Noise filter:</p> <ul style="list-style-type: none"> • A filter must be installed when there are inductive loads affecting the inverter. The inverter meets EN 61800-3:2012, category C3 or C2 when the Gefran special filter is used. See section 11.3 on VDI100 Instruction Manual. <p>Inverter:</p> <ul style="list-style-type: none"> • Output terminals T1, T2, and T3 are connected to U, V, and W terminals of the motor. If the motor runs in reverse while the inverter is set to run forward, swap any two terminals connections for T1, T2, and T3. • To avoid damaging the inverter, do not connect the output terminals T1, T2, and T3 to AC input power. • Connect the ground terminal properly. ($R_g < 10\Omega$.) <p>Motor:</p> <ul style="list-style-type: none"> • If the inverter drives multiple motors the output rated current of the inverter must be greater than the total current of all the motors.

3.3. General Wiring Diagram

3.4. Input / Output Power Section Block Diagram

The following diagrams 1 - 5 show the basic configuration of the power sections for the range of horsepower and input voltages. This is shown for reference only and is not a detailed description.

DC power supply

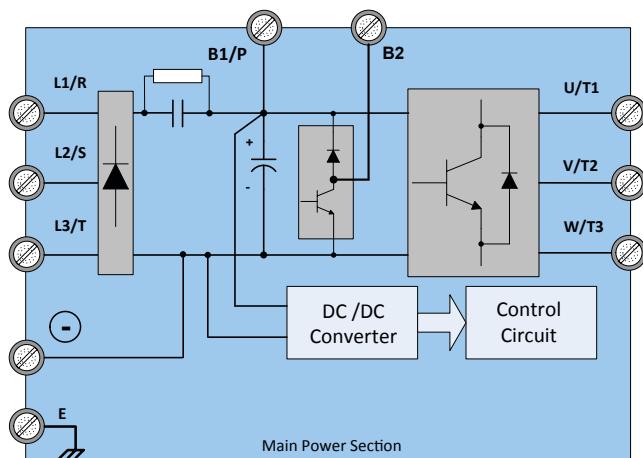

All the VDI100 ranges can be power supply from DC link.

DC link connection terminals:

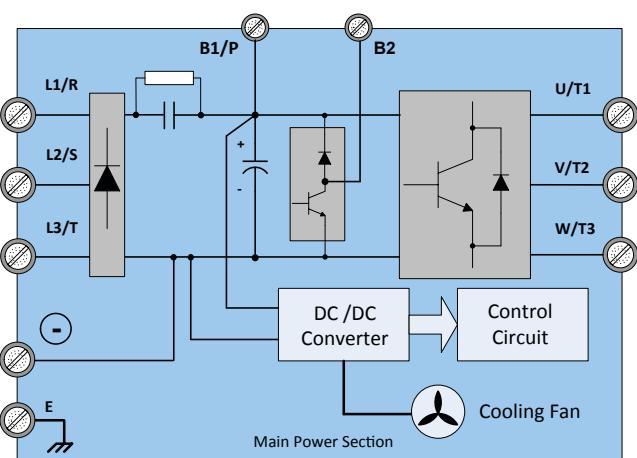

Range	Terminals	Diagrams
up to 30kW	B1/P and (-)	1 and 2
37-45kW	(+) and (-)	3

Note ! For DC power supply, fuses and DC pre-charge circuit must be provided externally.

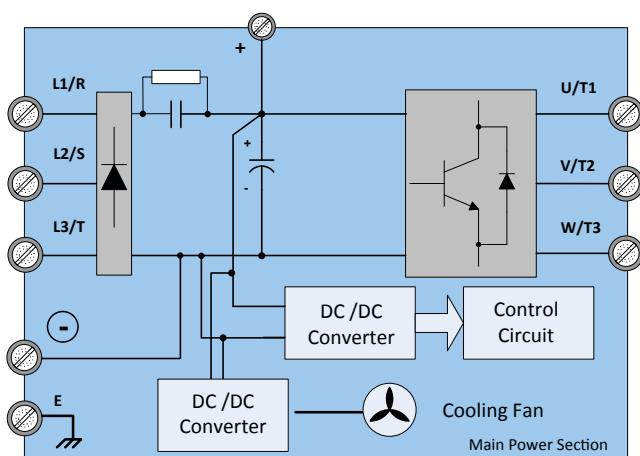

1: 0.75 ~ 1.5 kW

2: 2.2 ~ 30 kW

3: 37 ~ 45 kW

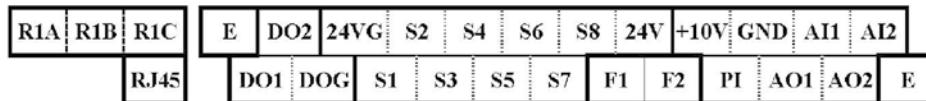

3.4.1. Cooling Fan Supply Voltage Selection (400V class)

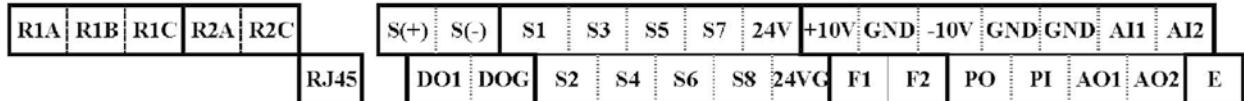

The inverter input voltage ranges from 380 to 480Vac.

3.5. User Terminals (Control Circuit Terminals)

0.75 ~ 2.2kW

3.7~45kW

Description of User Terminals

Type	Terminal	Terminal Function	Signal Level / Information
Digital input signal	S1	2-wire forward/ stop (default) * 1	Signal Level 24 VDC (photo isolated) Maximum current: 8mA Maximum voltage: 30 Vdc Input impedance: 4.22kΩ
	S2	2-wire reversal/ stop (default) * 1	
	S3	Multi-speed/ position setting command 1 (default) * 1	
	S4	Multi-speed/ position setting command 2 (default) * 1	
	S5	Multi-speed/ position setting command 3 (default) * 1	
	S6	Fault reset (default) * 1	
	S7	JOG frequency command (default) * 1	
	S8	External B.B.(Base Block) stop (coast to stop) (default) * 1	
24V Power supply	24V	Digital signal SOURCE point (SW3 switched to SOURCE)	±15%, Max. output current: 250mA (The sum of all loads connected)
	24VG	Common terminal of Digital signals Common point of digital signal SINK (SW3 switched to SINK)	+10V (Max. current , 20mA) -10V (Max. current , 20mA)
Analog input signal	+10V	Power for external speed potentiometer	+10V (Max. current , 20mA)
	-10V	Only above 3.7kW (include) support this terminal function	-10V (Max. current , 20mA)
	AI1	Multi-function analog input for speed reference (0~10V input)/ (-10V~10V input)	From 0 to +10V, From -10V to +10V Input impedance : 20KΩ Resolution: 11bit + 1
	AI2	Multi-function analog input terminals *2, can use SW2 to switch voltage or current input (0~10V)/(4~20mA)	From 0 to +10V, From -10V to +10V Input impedance: 200KΩ From 4 to 20 mA Input impedance: 250KΩ Resolution: 11bit + 1
	GND	Analog signal ground terminal	----
Analog output signal	E	Shielding wire's connecting terminal (Ground)	----
	A01	Multi-function analog output terminals *2 (0~10V output)	From 0 to 10V, From 4 to 20mA (Load < 500Ω) PWM Frequency: 10KHz
	A02	Multi-function analog output terminals *2. can use SW6 to switch voltage or current input (0~10V / 4~20mA output)	
Pulse output signal	GND	Analog signals ground terminal	----
	PO	Pulse output, Band width 32KHz, only above 3.7kW (include) support this terminal function.	Max. Frequency: 32KHz Open Collector output
Pulse input signal	GND	Analog signals ground terminal	----
	PI	Pulse command input, Bandwidth: 32KHz	L: from 0.0 to 0.5V H: from 4.0 to 13.2V Max. Frequency: 0 - 32KHz Built-in pull-up resistance. When open collector input is used, it is not required to connect resistance.
	GND	Analog signals ground terminal	----
Digital output	D01	Multi-function(open collector transistor) output *1 (Frame one only)	48Vdc, 2~50mA Open-collector output
	D02		
	DOG	Open collector transistor digital ground	----
Relay output	R1A	Relay A contact (multi-function output terminal) Relay B contact (multi-function output terminal)	Rating: 250Vac, 10 mA ~ 1A 30Vdc, 10 mA ~ 1A
	R1B	Relay contact common terminal,	----
	R1C	With the same functions as D01/D02	----
	R2A-R2C (Frame 2 and above)	With the same functions as D01/D02	Rating: 250Vac, 10 mA ~ 1A 30Vdc, 10 mA ~ 1A
Run Permissive Input	F1	On: normal operation. Off: stop. (Jumper wired between F1 and F2 has to be removed by using external contact to stop.)	24Vdc, 8mA, pull-up
	F2	Activation of this input will switch off the inverter output causing the motor to coast to stop.	24V Ground

Type	Terminal	Terminal Function	Signal Level / Information
RS-485 port	S (+)	RS485/ Modbus communication protocol	Differential input and output
	S (-)		
Grounding	E (G)	Grounding to earth Shield the connecting terminal	---

Notes:
 *1:Multi-function digital input/ output can be referred to in this manual (Group 03: External Terminals Digital Input / Output Function Group).
 *2:Multi-function analog input/ output can be referred to in this manual (Group 04 - External Terminal Analog Signal Input (Output) Function Group).

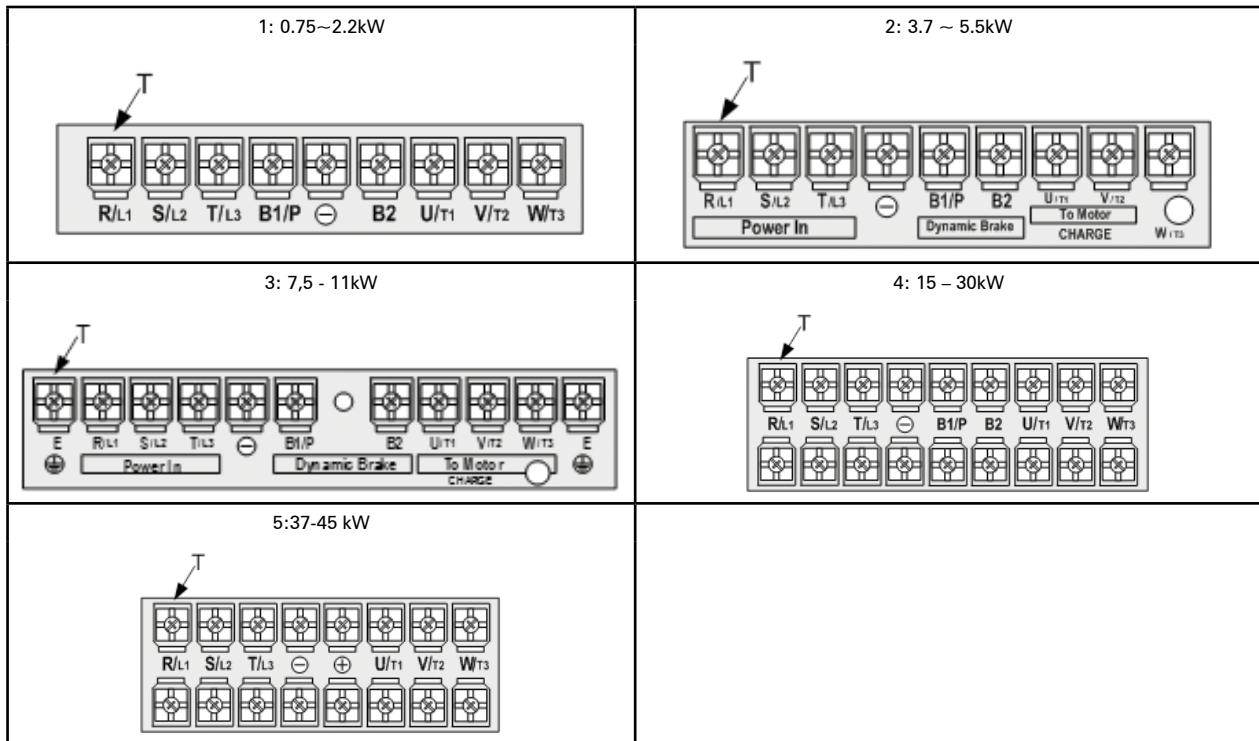

Caution

- Maximum output current capacity for terminal 10V is 20mA.
- Multi-function analog output AO1 and AO2 are used for an analog output meter. Do not use these outputs for feedback control.
- Control board's 24V and $\pm 10V$ are to be used for internal control only, Do not use the internal power-supply to power external devices.

3.6. Power Terminals

Terminal	0.75 ~ 30kW	37 ~45kW
R/L1 - S/L2 - T/L3	Input Power Supply	
B1/P	• B1/P- ⊖ : DC power supply • B1/P-B2: external braking resistor	-
B2		-
⊖		DC power supply or connect braking module
⊕	-	
U/T1 - V/T2 - W/T3	Inverter output	
E	Ground terminal	

Terminal screw size							
	1: 0.75~2.2kW	2: 3.7 ~ 5.5kW	3: 7.5 - 11kW	4: 15kW (size 3)	4: 15 – 22kW	4: 30kW	5:37-45 kW
T	M4	M4	M6	M6	M6	M6	M8
⊖	M4	M4	M6	M5	M6	M8	M8

Note ! For wire gauges and screw torques, please refer to the table in section 3.6

3.7. Inverter Specifications

Sizes VDI100			1007	1015	1022	2037	2055	3075	3110	3150	4150-F	4185	4220	5300	5370	5450

Allowable Voltage Fluctuation			-15% ~ +10%														
Allowable Frequency Fluctuation			±5%														
Braking Transistor			Built-in													Option (External Braking Module)	

(1) Based on the standard 4-pole induction motor. The selected inverter must have a higher output current rating than the motor.

(2) The default setting of VDI100 is HD (heavy duty mode). To switch VDI100 to ND (normal duty mode) set parameter (00-27) to 1. When switching to ND (normal duty mode), the frequency will change to 2kHz.

(3) The default setting of carrier frequency in HD mode is shown into the table below, if the setting value is higher than default setting, derating may be required.

(4) The default setting of carrier frequency in ND mode is 2kHz, if the setting value is higher than default setting, de-rating may be required.

(5) If control mode is set to SLV mode and maximum frequency is larger than 80Hz, the carrier frequency range is 2~8kHz.

(6) Option (External Braking Module)

Inverter Voltage and Power	HD mode carrier freq range	HD mode carrier freq default setting
0.75 ~ 22 kW	2~16 kHz	8 kHz
30 ~ 37 kW	2~12 kHz ⁽⁵⁾	5 kHz
45 kW	2~10 kHz ⁽⁵⁾	5 kHz

The following table shows maximum output frequency for each control mode.

Duty Cycle	Control mode (*)	Other settings	Maximum output frequency
Heavy Duty (00-27=0)	V/f V/f + PG, SLV2	maximum frequency set to 599Hz	599Hz
	SLV	0.75~11 kW	150Hz
		15 kW	110Hz
		18.5 ~ 22 kW	100Hz
		30~45kW carrier (11-01) is set as 8K or below 8K	100Hz
	SV	Full range	599Hz
	PMSV	Full range	Twice of Base frequency
Normal Duty (00-27=1)	PMSLV	Full range	Base frequency
	V/f V/f + PG	maximum frequency set to 120Hz	120Hz
	SLV /SV PMSV/ PMSLV SLV2	No normal duty mode	

(*) See PAR 00-00 Control mode selection (ch. "4.4. Description of Parameters" a pagina 89 of VDI100 UM manual).

3.7.1. Powerloss

Drive Model	Watt Loss (W)	Heat Loss (kcal/hr)	Carrier Frequency (kHz)

3.7.2. General Specifications

Control Characteristics	Motor type	Asynchronous Motor, Surface Permanent Magnet Motor, Interior Permanent Magnet Motor
	Control Modes	V/f, V/f+Encoder, SLV (vector control open loop), SV (vector control closed loop), PMSLV, PMSV
	Speed control accuracy	±1% (SLV, overload 200% and control range 1 : 30 (60...2Hz ; 50...1.6Hz)), ±1% (SLV, overload 150% and control range 1 : 50 (60...1.2Hz ; 50...1Hz)), ±1.5% (V/f open-loop, overload 150% and control range 1 : 40 / 60...1.5Hz ; 50...1.25Hz), ±0.1% (SV)
	Output Frequency range	0.1Hz~599Hz
	Output Frequency Resolution	0.01Hz
	Overload Tolerance	Heavy Duty Mode (HD.): 150% rated current for 60sec, 200% rated current for 2 sec. (Factory default) Normal Duty Mode (ND.): 120% rated current for 60sec
	Frequency Setting Signal	0 to +10V, -10V to +10V, 4 to 20mA or pulse train input
	Acceleration / Deceleration Time	0.0 ~ 6000.0 sec (separate acceleration and deceleration time set)
	Voltage / Frequency Characteristics	15 fixed + one customized V/f pattern
	Braking Unit	Built-in braking transistor on 0.75-30kW HD sizes
	Display	LED keypad with 5-digits 7-segment display (LCD keypad option)
	Main Control Functions	Auto-tuning, Zero Servo, Torque Control, Position Control, Droop, Soft-PWM, Over-Voltage Protection, Dynamic Braking, Speed Search, Frequency Traversing, Momentary Power Loss Restart, PID Control, Automatic Torque Compensation, Slip Compensation, RS-485 Communication, Close Loop Control with encoder, Simple PLC Function, 2 Analog Output, Torque-Off function, Application Presets
	Other Functions	Records of Power ON and Operation Time, 30 Fault History Records and Latest Fault State Record, Energy-Saving Function, Phase Loss Protection, DC Braking, Mechanical Brake Control, Dwell, S Curve Acceleration and Deceleration, Pulse input / output, Display of Engineering Unit, NPN / PNP Selection
Protection Functions	Stall Prevention	During Acceleration, Deceleration and continuous run
	Over Current (OC) and Output Short-Circuit (SC) Protection	When the current exceeds 200% of the inverter rated current
	Inverter Overload Protection (OL2)	Inverter stops when the output is higher than below conditions. Heavy Duty Mode (HD.): 150% rated current for 60sec, 200% rated current for 2 sec. (Factory default), Carrier frequency is from 2kHz to 8kHz Normal Duty Mode (ND.): 120% rated current for 60sec, Carrier frequency is 2kHz
	Motor Overload Protection (OL1)	Electrical overload protection curve
	Over Voltage Protection (OV)	0V threshold = 820Vdc
	Under Voltage (UV)	UV threshold = 380Vdc
	Momentary Power Loss Restart	When Power loss exceeds 15ms. This function can be set up to 2 sec
	Overheat Protection (OH)	Thermistor sensor on heatsink
	Ground Fault Protection (GF)	Protection by current detection circuit
	Charge Indicator	When main circuit DC voltage ≥ 50V, the CHARGE LED is on
Environment Specification	Output Phase Loss Protection (OPL)	If the OPL function acts, the motor stops rotation automatically
	Protection degree	IP20 / NEMA 1, with standard removable anti dust cover
	Operating Temperature	-10~+50°C (Sizes 1 to 5 without anti dust cover; sizes 6 -7) -10~+40°C (Sizes 1 to 5 with anti dust cover; sizes 6 -7 with NEMA 1 kit) Up to +60°C with derating.
	Storage Temperature	-20 ~ +70°C
	Humidity	95% RH or less (no condensation)
	Altitude	Altitude of 1000 meters or lower
	Vibration	1.0G, in compliance with IEC 60068-2-6
Certification	Pollution Degree	Meet IEC 60721-3-3 Class 3C2
	Communication Function	Built-in: RS-485 with Modbus RTU / ASCII (standard RJ45 connection) Optional: Profibus/CANopen/DeviceNet/TCP-IP
	DC choke	no
	EMI filter	Add-on module on -F version In compliance with EN61800-3 standard
CE RoHS		In compliance with EN61800-3 (EMC) and EN61800-5-1(LVD) Conformity to RoHS directive
	cUL us	UL508C
Encoder expansion card (optional)		Asynchronous Motor: Digital incremental Line driver and Open collector PM motor: Digital incremental Line driver, Resolver, SinCos

3.8. Capacitor reforming Guide after long storage

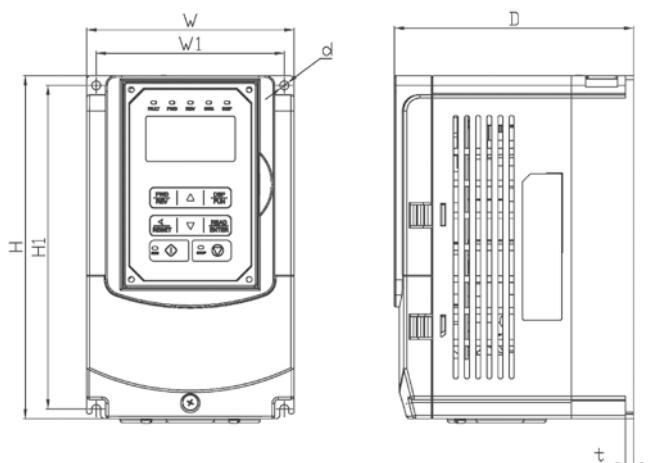

For correct performance of this product after long storage before use it is important that Inverter Capacitors are reformed according to the guide below:

Storage time	Procedure to re-apply voltage
≤1 year	Apply rated voltage (1) of inverter in the normal way
Between 1-2 years	Apply rated voltage of inverter to the product for one hour
≥2 years	Use a variable AC power supply to 1. Connecting 25% of inverter rated voltage for 30 minutes. 2. Connecting 50% of inverter rated voltage for 30 minutes. 3. Connecting 75% of inverter rated voltage for 30 minutes. 4. Connecting 100% of inverter rated voltage for 210 minutes. Once the procedures completed, inverter just can be used normally.

(1): Please refer the rated voltage according to model label of inverter.

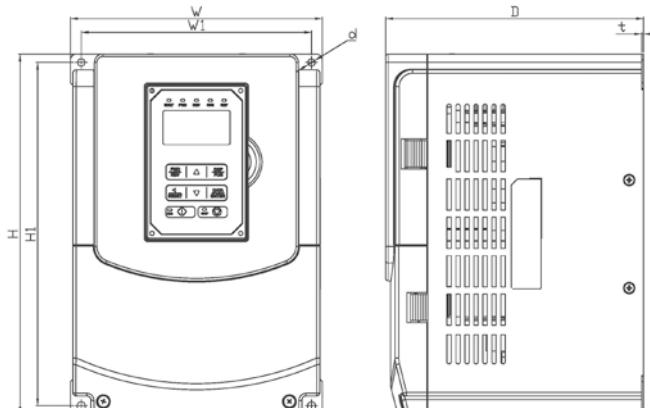

3.9. Inverter Dimensions

Sizes 1 and 2 (IP20/NEMA1)

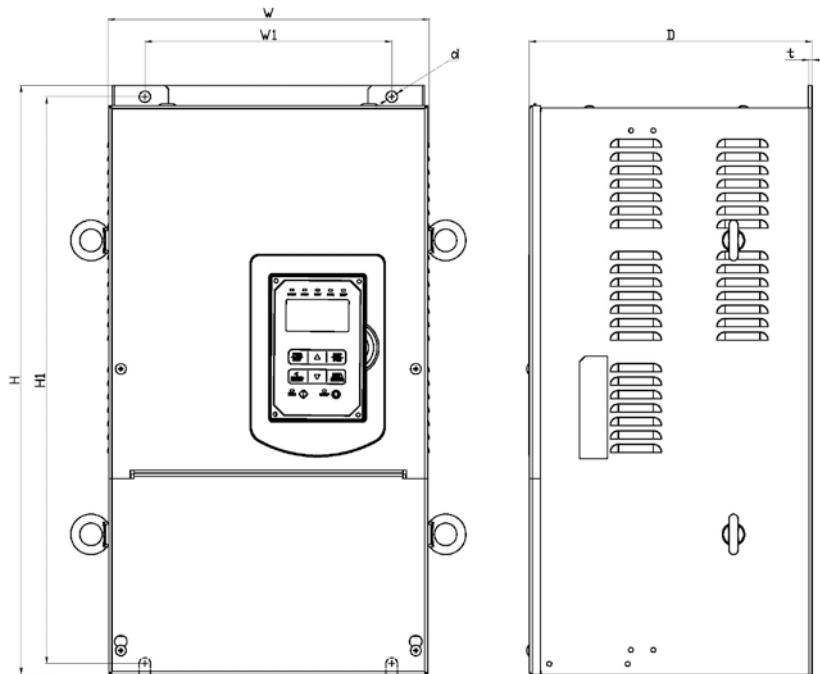

Inverter Model	Dimensions in mm (inch)							Net Weight kg (lbs)
	W	H	D	W1	H1	t	d	
VDI100-1007-KBX-4	130 (5.12)	215 (8.46)	150 (5.91)	118 (4.65)	203 (7.99)	5 (0.20)	M5	2.2 (4.9)
VDI100-1015-KBX-4	130 (5.12)	215 (8.46)	150 (5.91)	118 (4.65)	203 (7.99)	5 (0.20)	M5	2.2 (4.9)
VDI100-1022-KBX-4	130 (5.12)	215 (8.46)	150 (5.91)	118 (4.65)	203 (7.99)	5 (0.20)	M5	2.2 (4.9)
VDI100-2037-KBX-4	140 (5.51)	279 (10.98)	177 (6.97)	122 (4.80)	267 (10.51)	7 (0.28)	M6	3.8 (8.4)
VDI100-2055-KBX-4	140 (5.51)	279 (10.98)	177 (6.97)	122 (4.80)	267 (10.51)	7 (0.28)	M6	3.8 (8.4)

Sizes 3 and 4 (IP20/NEMA1)

Inverter Model	Dimensions in mm (inch)							Net Weight kg (lbs)
	W	H	D	W1	H1	t	d	
VDI100-3075-KBX-4	210 (8.27)	300 (11.81)	215 (8.46)	192 (7.56)	286 (11.26)	1.6 (0.06)	M6	6.2 (13.67)
VDI100-3110-KBX-4	210 (8.27)	300 (11.81)	215 (8.46)	192 (7.56)	286 (11.26)	1.6 (0.06)	M6	6.2 (13.67)
VDI100-3150-KBX-4	210 (8.27)	300 (11.81)	215 (8.46)	192 (7.56)	286 (11.26)	1.6 (0.06)	M6	6.2 (13.67)
VDI100-4185-KBX-4	265 (10.43)	360 (14.17)	225 (8.86)	245 (9.65)	340 (13.39)	1.6 (0.06)	M8	10 (22.05)
VDI100-4220-KBX-4	265 (10.43)	360 (14.17)	225 (8.86)	245 (9.65)	340 (13.39)	1.6 (0.06)	M8	10 (22.05)

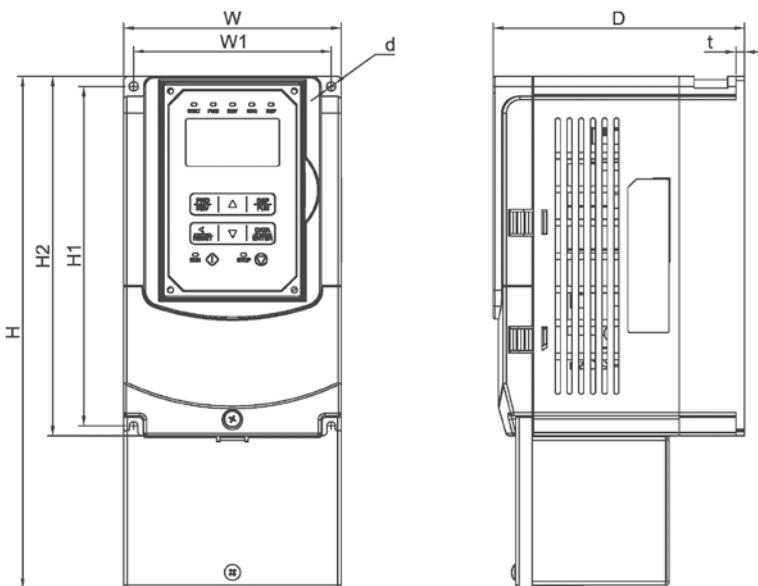

Size 5 (IP20/NEMA1)

Inverter Model	Dimensions in mm (inch)							Net Weight kg (lbs)

4. Keypad and Programming Functions

4.1. LED Keypad (KB-LED-VDI100)

4.1.1. Keypad Display and Keys

DISPLAY	
5 Digit LED Display	Monitor inverter signals, view / edit parameters, fault / alarm display.
LED INDICATORS	
FAULT	LED ON when a fault or alarm is active.
FWD	LED ON when inverter is running in forward direction, flashing when stopping.
REV	On when inverter is running in reverse direction, flashing when stopping.
SEQ	LED ON when RUN command is from the external control terminals or from serial communication
REF	LED ON when Frequency Reference command is from the external control terminals or from serial communication
KEYS (8)	
RUN	RUN Inverter in Local Mode
STOP	STOP Inverter
▲	Parameter navigation Up, Increase parameter or reference value
▼	Parameter navigation down, decrease parameter or reference value
FWD/REV	Used to switch between Forward and Reverse direction
DSP/FUN	Used to scroll to next screen Frequency screen -> Function selection -> Monitor parameter
◀ / RESET	Selects active seven segment digit for editing with the ▲ ▼ keys Used to reset fault condition.
READ / ENTER	Used to read and save the value of the active parameter

Auto-Repeat Keys

Holding the ▲ UP or ▼ DOWN key for a longer period of time will initiate the auto-repeat function resulting in the value of the selected digit to automatically increase or decrease.

4.2. Parameters

Parameter group	Group Name
Group 00	Basic Parameters
Group 01	V/F Control Parameters
Group 02	IM Motor Parameters
Group 03	External Digital Input and Output Parameters
Group 04	External Analog Input and Output Parameters
Group 05	Multi-Speed Parameters
Group 06	Automatic Program Operation Parameters
Group 07	Start /Stop Parameters
Group 08	Protection Parameters
Group 09	Communication Parameters
Group 10	PID Parameters
Group 11	Auxiliary Parameters
Group 12	Monitoring Parameters
Group 13	Maintenance Parameters
Group 14	PLC Parameters
Group 15	PLC Monitoring Parameters
Group 16	LCD Parameters
Group 17	Automatic Tuning Parameters
Group 18	Slip Compensation Parameters
Group 19	Wobble Frequency Parameters
Group 20	Speed Control Parameters
Group 21	Torque And Position Control Parameters
Group 22	PM Motor Parameters

Parameter Attribute	
*1	Parameters can be changed during run operation.
*2	Reserved
*3	Parameter will not reset to default during a factory reset (initialization).
*4	Read-only parameter
*5	Parameter will be displayed in being coupled with the option card.
*6	Parameter will be displayed only in LED keypad.
*7	Parameter will be displayed only in LCD keypad.
*8	When 13-08 setting is changed, the value will be also changed.
Default	
S	Size (set value depending on the size of the device)

Control mode parameter setting:

0 = settable
X = not settable
- = not applicable

Group 00: Basic Parameters

*: Refer to the following attachment 1.

**: Before to set up 00-32 Application, it should do initialized setting (parameter 13-08) first. When setting 00-32, the I/O port function changed automatically. To avoid accident, be sure to confirm the I/O port signal of inverter and external terminal control.

*** If parameter 00-27 is set to ND mode, group 02 motor 1 parameter will automatically adjust to more than 1 class of it.

If parameter 00-27 is set to HD mode, group 02 motor 1 parameter will automatically adjust to the same class of it.

It is suggested that parameter 00-27 be set first before motor performs auto-tuning because the parameter will make the motor parameter automatically be changed.

**** If the maximum output frequency of motor is over 300HZ, the frequency resolution is changed to 0.1Hz

12-22	Motor's Rotation Speed (rpm)	Display motor's current rotation speed. In VF/SLV mode the speed is estimated by output power In PG/SV mode, motor's rotation speed is calculated by feedback frequency. Max limit is 65535	-	rpm	0	0	0	0	0	0	
12-23	Output Power Factor (Pfo)	Display the current output power factor	-	-	0	0	0	0	0	0	
12-24	Control Mode	Display control mode 0: VF 1: PG 2: SLV 3: SV 4: PSV 5: PMSLV 6: SLV2	-	-	0	0	0	0	0	0	
12-25	AI1 Input	Display the current AI1 input (-10V corresponds to -100%, 10V corresponds to 100%,)	-	%	0	0	0	0	0	0	
12-26	AI2 Input	Display the current AI2 input (0V or 4mA corresponds to 0%, 10V or 20mA corresponds to 100%)	-	%	0	0	0	0	0	0	
12-27	Motor Torque	Display the current torque command (100% corresponds to motor torque)	-	%	X	X	0	0	0	0	X
12-28	Motor Torque Current (Iq)	Display the current q-axis current	-	%	X	X	0	0	0	0	X
12-29	Motor Excitation Current (Id)	Display the current d-axis current	-	%	X	X	0	0	0	0	X
12-30	ASR Deviation	Display deviation of speed controller (speed command - speed feedback) (100% corresponds to the maximum frequency set by 01-02)	-	%	X	0	X	0	0	X	X
12-31	Reserved										
12-32	ASR Output	Display output value of speed controller (100% corresponds to the maximum frequency set by 01-02)	-	%	X	0	X	0	0	X	X
12-33	PG Feedback	Display feedback's speed value of speed controller (100% corresponds to the maximum frequency set by 01-02)	-	%	X	0	X	0	0	X	X
12-34	Reserved										
12-35	Zero-servo Pulse	When display SV position mode, the position error pulse number of the zero speed servo (the pulse number of a circle is four times of set values of 20-27)	-	Pulse	X	X	X	0	0	X	X

Group 12: Monitoring Parameters

Code	Parameter Name	Setting Range	Default	Unit	Control mode							Attribute
					V/f	V/f +PG	SLV	SV	PM SV	PM SLV	SLV2	
12-36	PID Input	Display input error of the PID controller (PID target value - PID feedback) (100% corresponds to the maximum frequency set by 01-02 or 01-16)	-	%	0	0	0	0	0	0	0	
12-37	PID Output	Display output of the PID controller	-	%	0	0	0	0	0	0	0	
12-38	PID Setting	Display the target value of the PID controller (100% corresponds to the maximum frequency set by 01-02 or 01-16)	-	%	0	0	0	0	0	0	0	
12-39	PID Feedback	Display the feedback value of the PID controller (100% corresponds to the maximum frequency set by 01-02 or 01-16)	-	%	0	0	0	0	0	0	0	
12-40	Reserved											
12-41	Heatsink Temperature*	Display the heatsink temperature of IGBT temperature	*	°C	0	0	0	0	0	0	0	
12-42	RS-485 Error Code	 1: CRC Error 1: Data length Error 1: Data Function Error 1: Parity Error 1: Overrun Error 1: Framing Error 1: Time out Error Reserved	-	-	0	0	0	0	0	0	0	
12-43	Inverter Status	 1: Inverter ready 1: During running 1: During zero speed 1: During speed agree 1: During fault detection (minor fault) 1: During fault detection (major fault) Reserved	-	-	0	0	0	0	0	0	0	
12-44	Pulse Input Frequency	Display the frequency value of pulse input	-	Hz	0	0	0	0	0	0	0	
12-45	Recent Fault Message	Display current fault message	-	-	0	0	0	0	0	0	0	
12-46	Previous Fault Message	Display previous fault message	-	-	0	0	0	0	0	0	0	
12-47	Previous Two Fault Messages	Display previous two fault messages	-	-	0	0	0	0	0	0	0	
12-48	Previous Three Fault Messages	Display previous three fault messages	-	-	0	0	0	0	0	0	0	
12-49	Previous Four Fault Messages	Display previous four fault messages	-	-	0	0	0	0	0	0	0	
12-50	DIO Status of Current Fault	Display the DI/D0 status of current fault Description is similar to 12-05	-	-	0	0	0	0	0	0	0	
12-51	Inverter Status of Current Fault	Display the inverter status of current fault Description is similar to 12-43	-	-	0	0	0	0	0	0	0	
12-52	Trip Time 1 of Current Fault	Display the operation time of current fault, 12-53 is the days, while 12-52 is the remaining hours.	-	Hr	0	0	0	0	0	0	0	
12-53	Trip Time 2 of Current Fault		-	day	0	0	0	0	0	0	0	
12-54	Frequency Command of Previous Fault	Display frequency command of previous fault	-	Hz	0	0	0	0	0	0	0	
12-55	Output Frequency of Previous Fault	Display output frequency of previous fault	-	Hz	0	0	0	0	0	0	0	
12-56	Output Current of Previous Fault	Display output current of previous fault	-	A	0	0	0	0	0	0	0	
12-57	Output Voltage of Previous Fault	Display output voltage of previous fault	-	V	0	0	0	0	0	0	0	
12-58	DC Voltage of Previous Fault	Display DC voltage of previous fault	-	V	0	0	0	0	0	0	0	
12-59	DIO Status of Previous Fault	Display DI/D0 status of previous fault Description is similar to 12-05	-	-	0	0	0	0	0	0	0	

Group 12: Monitoring Parameters

Code	Parameter Name	Setting Range	Default	Unit	Control mode						Attribute	
					V/f	V/f +PG	SLV	SV	PM SV	PM SLV	SLV2	
12-60	Inverter Status of Previous Fault	Display inverter status of previous fault Description is similar to 12-43	-	-	0	0	0	0	0	0	0	
12-61	Trip Time 1 of Last Fault	Display the operation time of last time's fault, 12-62 is the days, while 12-61 is the remaining hours .	-	Hr	0	0	0	0	0	0	0	
12-62	Trip Time 2 of Last Fault		-	day	0	0	0	0	0	0	0	
12-63	Recent Warning Messages	Display the recent warning messages	-	-	0	0	0	0	0	0	0	
12-64	Previous Warning Message	Display the previous warning message	-	-	0	0	0	0	0	0	0	
12-65	Motor Start Angle	0~360	-	-	X	X	X	X	0	X	X	
12-66	Encoder Angle	0~360	-	-	X	0	X	0	0	X	X

17-14	Selection of Rotation Auto-tuning	0: VF Rotation Auto-tuning 1: Vector Rotation Auto-tuning	0	-	0	0	0	0	X	X	0	

kVA: The default value of this parameter will be changed by different capacities of inverter.

*: The default value is 1 in VF/ VF+PG mode while the default value is 0 in SLV/ SV/ SLV2 mode.

**: It is suggested that HD/ ND mode (00-27) and application presets (00-32) be selected first before motor performs auto-tuning.

Note: The value of mode selection of automatic tuning is 6 (Static Auto-tuning Combination). When do auto-tuning with no-load motor, it suggest select 17-00=5 (Rotation Auto-tuning Combination)

** Displayed when 17-00=2

*1: It can be set when 17-00=1, 2, 6.

5. Troubleshooting and Fault Diagnostics

5.1. General

Inverter fault detection and early warning / self-diagnosis function. When the inverter detects a fault, a fault message is displayed on the keypad. The fault contact output energizes and the motor will coast to stop (The stop method can be selected for specific faults).

When the inverter detects a warning / self-diagnistics error, the digital operator will display a warning or self-diagnostic code, the fault output does not energize in this case. Once the warning is removed, the system will automatically return to its original state.

5.2. Fault Detection Function

When a fault occurs, please refer to Table 10.2.1 for possible causes and take appropriate measures.

Use one of the following methods to restart:

1. Set one of multi-function digital input terminals (03-00, 03-07) to 17 (Fault reset); activate input
2. Press the reset button on the keypad.
3. Power down inverter wait until keypad goes blank and power-up the inverter again.

When a fault occurs, the fault message is stored in the fault history (see group 12 parameters).

LED display	Description	Cause	Possible solutions
OC over current	The inverter output current exceeds the overcurrent level (200% of the inverter rated current).	<ul style="list-style-type: none"> • Acceleration / Deceleration time is too short. • Contactor at the inverter output side. • A special motor or applicable size is greater than the inverter rated value. • Short circuit or ground fault. 	<ul style="list-style-type: none"> • Extend acceleration / deceleration time. • Check the motor wiring. • Disconnect motor and try running inverter.
OCA over current	The inverter output current exceeds the overcurrent level in acceleration time.	<ul style="list-style-type: none"> • Acceleration time is too short. • Size of motor is bigger than inverter. • Short circuit between winding and shell of motor. • Short circuit between wire and ground of motor. • IGBT broken module. 	<ul style="list-style-type: none"> • Set the longer acceleration time. • Change to bigger size of inverter. • Examine motor. • Check the wire. • Replace IGBT module (Please contact Gefran Technical Assistance).
OCC over current	The inverter output current exceeds the overcurrent level in constant speed.	<ul style="list-style-type: none"> • Instantaneous change of load. • Instantaneous change of current. 	<ul style="list-style-type: none"> • Change to bigger size of inverter. • Add reactor to power source.
OCd over current	The inverter output current exceeds the overcurrent level in deceleration time.	<ul style="list-style-type: none"> • Deceleration time is too short. 	<ul style="list-style-type: none"> • Set the longer acceleration time.
SC short circuit	Inverter output short circuit or ground fault.	<ul style="list-style-type: none"> • Short circuit or ground fault (08-23 = 1). • Motor damaged (insulation). • Wire damage or deterioration. 	<ul style="list-style-type: none"> • Check the motor wiring. • Disconnect motor and try running inverter.
GF Ground fault	The current to ground exceeds 50% of the inverter rated output current (08-23 = 1, GF function is enabled).	<ul style="list-style-type: none"> • Motor damaged (insulation). • Wire damage or deterioration. • Inverter DCCT sensors defect. 	<ul style="list-style-type: none"> • Replace motor. • Check the motor wiring. • Disconnect motor and try running inverter. • Check resistance between cables and ground. • Reduce carrier frequency
OV Over voltage	DC bus voltage exceeds the OV detection level (820Vdc). (If input voltage 01-14 is set lower than 400V, the OV detection value will be decreased to 700Vdc.)	<ul style="list-style-type: none"> • Deceleration time set too short, resulting in regenerative energy flowing back from motor to the inverter. • The inverter input voltage is too high. • Use of power factor correction capacitors. • Excessive braking load. • Braking transistor or resistor defective. • Speed search parameters set incorrectly. 	<ul style="list-style-type: none"> • Increase deceleration time • Reduce input voltage to comply with the input voltage requirements or install an AC line reactor to lower the input voltage. • Remove the power factor correction capacitor. • Use dynamic braking unit. • Replace braking transistor or resistor. • Adjust speed search parameters.

LED display	Description	Cause	Possible solutions
UV Under voltage	DC bus voltage is lower than the UV detection level (380Vdc) or the pre-charge contactor is not active while the inverter is running. (The detection value can be adjusted by 07-13).	<ul style="list-style-type: none"> The input voltage is too low. Input phase loss. Acceleration time set too short. Input voltage fluctuation. Pre-charge contactor damaged. DC bus voltage feedback signal value not incorrect. 	<ul style="list-style-type: none"> Check the input voltage. Check input wiring. Increase acceleration time. Check power source Replace pre-charge contactor Replace control board or complete inverter.
IPL input phase loss	Phase loss at the input side of the inverter or input voltage imbalance, active when 08-09 = 1 (enabled)	<ul style="list-style-type: none"> Wiring loose in inverter input terminal. Momentary power loss. Input voltage imbalance. 	<ul style="list-style-type: none"> Check input wiring / faster screws. Check power supply
OPL output phase loss	Phase loss at the output side of the inverter, active when 08-10 = 1 (enabled).	<ul style="list-style-type: none"> Wiring loose in inverter output terminal. Motor rated current is less than 10% of the inverter rated current. 	<ul style="list-style-type: none"> Check output wiring / faster screws. Check motor & inverter rating.
OH1 Heatsink overheat	The temperature of the heat sink is too high. Note: when OH1 fault occurs three times within five minutes, it is required to wait 10 minutes before resetting the fault.	<ul style="list-style-type: none"> Ambient temperature too high. cooling fan failed Carrier frequency set too high. Load too heavy. 	<ul style="list-style-type: none"> Install fan or AC to cool surroundings. Replace cooling fan. Reduce carrier frequency. Reduce load / Measure output current
OL1 Motor overload	Internal motor overload protection tripped, active when protection curve 08-05 = xxx1.	<ul style="list-style-type: none"> Voltage setting V/f mode too high, resulting in over-excitation of the motor. Motor rated current (02-01) set incorrectly. Load too heavy. 	<ul style="list-style-type: none"> Check V/f curve. Check motor rated current Check and reduce motor load, check and operation duty cycle.
OL2 Inverter overload	Inverter thermal overload protection tripped. If an inverter overload occurs 4 times in five minutes, it is required to wait 4 minutes before resetting the fault.	<ul style="list-style-type: none"> Voltage setting V/f mode too high, resulting in over-excitation of the motor. Inverter rating too small. Load too heavy. 	<ul style="list-style-type: none"> Check V/f curve. Replace inverter with larger rating. Check and reduce motor load, check and operation duty cycle.
OT Over torque detection	Inverter output torque is higher than 08-15 (over torque detection level) for the time specified in 08-16. Parameter 08-14 = 0 to activate.	<ul style="list-style-type: none"> Load too heavy. 	<ul style="list-style-type: none"> Check over torque detection parameters (08-15 / 08-16). Check and reduce motor load, check and operation duty cycle.
UT Under torque detection	Inverter output torque is lower than 08-19 (under torque detection level) for the time specified in 08-20. Parameter 08-18 = 0 to activate.	<ul style="list-style-type: none"> Sudden drop in load. Belt break. 	<ul style="list-style-type: none"> Check under torque detection parameters (08-19 / 08-20). Check load / application.
run Switch for Motor1/ Motor2	Switch for Motor1/Motor2 in running time	<ul style="list-style-type: none"> Execute command for switching motor2 in running time Execute command for switching motor in running time 	<ul style="list-style-type: none"> Revise the sequence control and switch motor in top time.
OS Over speed	Motor speed exceeds level set in 20-20 (PG Over speed Level) for the time set in 20-21 (PG over speed time). Active when 20-19 (= 0 or 1). This fault is active V/f + PG and SV control mode (00-00 = 1 or 3 or 4). Motor speed can be monitored by 12-22	<ul style="list-style-type: none"> Motor speed overshoot (ASR) PG ppr set incorrectly. Overspeed parameters set incorrectly. 	<ul style="list-style-type: none"> Check ASR parameters group 21. Check PG parameters Check overspeed parameters 20-20/20-12
PG0 PG Open circuit	PG pulses are not received by the inverter for the time specified in 20-26 (PG open circuit detection time). This fault is active V/f + PG and SV control mode (00-00 = 1 or 3 or 4).	<ul style="list-style-type: none"> PG cable disconnected. PG has no power. Mechanical brake active preventing motor from turning. 	<ul style="list-style-type: none"> Check PG wiring. Check PG power-supply. Make sure brake is released.

LED display	Description	Cause	Possible solutions
DEV Speed deviation	Motor speed rises above 20-23 level (PG speed deviation level) for the time specified in 20-24 (PG deviation time)...Active when parameter 20-22(=0 or 1). This fault is active V/f + PG and SV control mode (00-00 = 1 or 3 or 4).	<ul style="list-style-type: none"> • Load too heavy • Mechanical brake active preventing motor from turning. • PG wiring error. • PG parameters (group 20) set incorrectly. • Acceleration / deceleration time set to short. 	<ul style="list-style-type: none"> • Check load • Make sure brake is released. • Check PG wiring. • Check PG parameters 20-23/20-24. • Increase Acceleration / deceleration time.
CE communication error	No Modbus communication received in for the time specified in 09-06 (communication error detection time). Active when 09-07(= 0 to 2).	<ul style="list-style-type: none"> • Connection lost or wire broken. • Host stopped communicating. 	<ul style="list-style-type: none"> • Check connection • Check host computer / software.
FB PID feedback loss	PID feedback signal falls below level specified in 10-12 (PID feedback loss detection level) for the time specified in 10-13 (Feedback loss detection time). Active when parameter (10-11 = 2).	<ul style="list-style-type: none"> • Feedback signal wire broken • Feedback sensor broken. 	<ul style="list-style-type: none"> • Check feedback wiring • Replace feedback sensor.
STO Run Permissive	Run permissive input open (F1, F2).	<ul style="list-style-type: none"> • Terminal board Input F1 and F2 are not connected 	<ul style="list-style-type: none"> • Check F1 and F2 connection
SS1 Digital input Stop command	Digital input Stop command enabled	<ul style="list-style-type: none"> • 08-30 =0 and 03-00~03-07=58 	<ul style="list-style-type: none"> • Check if 08-30 =0 and 03-00~03-07=58
EF0 External fault 0	External fault (Modbus)	<p>Modbus communication 0x2501 bit 2= "1"</p> <ul style="list-style-type: none"> • Multifunction digital input external fault active. 	<ul style="list-style-type: none"> • Reset Modbus communication 0x2501 bit 2= "1"
EF1 External fault (S1)			
EF2 External fault (S2)			
EF3 External fault (S3)			
EF4 External fault (S4)			
EF5 External fault (S5)			
EF6 External fault (S6)			
EF7 External fault (S7)			

LED display	Description	Cause	Possible solutions
EF8 External fault (S8) 	External fault (Terminal S8) Active when 03-07 = 25, and Inverter external fault selection 08-24=0 or 1.	• Multifunction digital input external fault active.	• Multi-function input function set incorrectly. • Check wiring
CF07 Motor control fault 	Motor control fault	• SLV mode is unable to run motor	• Perform rotational or stationary auto-tune • Increase minimum output frequency (01-08)
CF08 Motor control fault 	Motor control fault	• Start or Run fault in PMSLV mode	• Increase the value of 22-10 properly. • Re auto-tune (22-21). • Check if the load is too heavy to raise torque output limit.
FU fuse open 	DC bus fuse blown	• IGBT damaged. • Short circuit output terminals.	• Check IGBTs • Check for short circuit at inverter output. • Replace inverter.
CF00 Operator Communication Error <i>LCD display only *</i>	Errors of data transmission occur in LCD keypad	• LCD keypad and inverter cannot transmit data after power on 5 seconds	• Disconnect the operator and then reconnect. • Replace the control board
CF01 Operator Communication Error 2 <i>LCD display only *</i>	Errors of data transmission occur in LCD keypad	• LCD keypad and inverter can transmit data but transmission error occurs for more than 2 seconds	• Disconnect the operator and then reconnect. • Replace the control board
CTER CT Failure 	Errors of detecting voltages from three phase's current transformer to detect output current.	• Errors of detecting voltages • Noises too much • Control board failure	• Check current transformer signal and the voltage on the control board.
CF20 Communication Failure 	Use Profibus & Modbus Communication at the same time.	• Maybe use two kind of communication type at the same time.	• Check only use one kind of communication type.

* When the communication errors occur in LED keypad (KB-LED-VDI100), the LED will stay the screen and stop action.

5.3. Warning / Self-diagnosis Detection Function

When the inverter detects a warning, the keypad displays a warning code (flash).

- Note:** The fault contact output does not energize on a warning and the inverter continues operation. When the warning is no longer active the keypad will return to its original state.
- When the inverter detected a programming error (for example two parameters contradict each other or are set to an invalid setting), the keypad displays a self-diagnostics code.
- Note:** The fault contact output does not energize on a self-diagnostics error. While a self-diagnostics code is active the inverter does not accept a run command until the programming error is corrected.
- Note:** When a warning or self- diagnostic error is active the warning or error code will flash on the keypad.

When the RESET key is pressed, the warning message (flash) disappears and returns after 5 sec. If the warning or self-diagnostic error still exists.

Refer to Table 10.3.1 for an overview, cause and corrective action for inverter warnings and self-diagnostic errors.

Table 10.3.1 warning / self-diagnosis and corrective actions

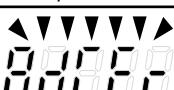

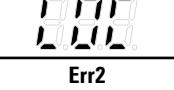

LED display	Description	Possible causes	Corrective action
OV (flash) Over voltage	DC bus voltage exceeds the OV detection level (820Vdc). (If input voltage 01-14 is set lower than 400V, the OV detection value will be decreased to 700Vdc)	<ul style="list-style-type: none"> Deceleration time set too short, resulting in regenerative energy flowing back from motor to the inverter. The inverter input voltage is too high. Use of power factor correction capacitors. Excessive braking load. Braking transistor or resistor defective. Speed search parameters set incorrectly. 	<ul style="list-style-type: none"> Increase deceleration time Reduce input voltage to comply with the input voltage requirements or install an AC line reactor to lower the input voltage. Remove the power factor correction capacitor. Use dynamic braking unit. Replace braking transistor or resistor. Adjust speed search parameters.
UV (flash) under voltage	DC bus voltage is lower than the UV detection level (380Vdc) or the pre-charge contactor is not active while the inverter is running. (the detection value can be adjusted by 07-13)	<ul style="list-style-type: none"> The input voltage is too low. Input phase loss. Acceleration time set too short. Input voltage fluctuation. Pre-charge contactor damaged. DC bus voltage feedback signal value not incorrect. 	<ul style="list-style-type: none"> Check the input voltage. Check input wiring. Increase acceleration time. Check power source Replace pre-charge contactor Replace control board or complete inverter
OH1 Heatsink overheat	The temperature of the heat sink is too high. Note: when OH1 fault occurs three times within five minutes, it is required to wait 10 minutes before resetting the fault.	<ul style="list-style-type: none"> Ambient temperature too high. Cooling fan failed Carrier frequency set too high. Load too heavy. 	<ul style="list-style-type: none"> Install fan or AC to cool surroundings. Replace cooling fan. Reduce carrier frequency. Reduce load / Measure output current
OH2 (flash) Inverter over heating warning	Inverter overheat warning Multi-function digital input set to 31. (Terminal S1 ~ S8) Active when 03-00 ~ 03-07 = 31.	<ul style="list-style-type: none"> Multifunction digital input overheat warning active. 	<ul style="list-style-type: none"> Multi-function input function set incorrectly. Check wiring
OT (flash) over torque detection	Inverter output torque is higher than 08-15 (over torque detection level) for the time specified in 08-16. Parameter 08-14 = 0 to activate.	<ul style="list-style-type: none"> Load too heavy. 	<ul style="list-style-type: none"> Check over torque detection parameters (08-15 / 08-16). Check and reduce motor load, check and operation duty cycle.
UT (flash) under torque detection	Inverter output torque is lower than 08-19 (under torque detection level) for the time specified in 08-20. Parameter 08-18 = 0 to activate.	<ul style="list-style-type: none"> Sudden drop in load. Belt break. 	<ul style="list-style-type: none"> Check under torque detection parameters (08-19 / 08-20). Check load / application.
bb1 (flash) External baseblock	External base block (Terminal S1)	<ul style="list-style-type: none"> Multifunction digital input external baseblock active 	<ul style="list-style-type: none"> Multi-function input function set incorrectly. Check wiring
bb2 (flash) External baseblock	External base block (Terminal S2)		
bb3 (flash) External baseblock	External base block (Terminal S3)		

LED display	Description	Possible causes	Corrective action
bb4 (flash) External baseblock 	External base block (Terminal S4)		
bb5 (flash) External baseblock 	External base block (Terminal S5)	• Multifunction digital input external baseblock active	• Multi-function input function set incorrectly. • Check wiring
bb6 (flash) External baseblock 	External base block (Terminal S6)		
bb7 (flash) External baseblock 	External base block (Terminal S7)		
bb8 (flash) External baseblock 	External base block (Terminal S8)	• Multifunction digital input external baseblock active	• Multi-function input function set incorrectly. • Check wiring
OS (flash) Motor over speed 	Motor speed exceeds level set in 20-20 (PG Over speed Level) for the time set in 20-21 (PG over speed time). Active when 20-19 (= 0 or 1). This fault is active V/f + PG and SV control mode (00-00 = 1 or 3 or 4). Motor speed can be monitored by 12-22	• Motor speed overshoot (ASR) • PG ppr set incorrectly. • Overspeed parameters set incorrectly.	• Check ASR parameters group 21. • Check PG parameters • Check overspeed parameters 20-20/20-12.
PGO (flash) PG open circuit 	PG pulses are not received by the inverter for the time specified in 20-26 (PG open circuit detection time). This fault is active V/f + PG and SV control mode (00-00 = 1 or 3 or 4).	• PG cable disconnected. • PG has no power. • Mechanical brake active preventing motor from turning.	• Check PG wiring. • Check PG power-supply. • Make sure brake is released.
DEV (flash) Speed deviation 	Motor speed rises above 20-23 level (PG speed deviation level) for the time specified in 20-24 (PG deviation time). Active when parameter 20-22(=0 or 1). This fault is active V/f + PG and SV control mode (00-00 = 1 or 3 or 4).	• Load too heavy • Mechanical brake active preventing motor from turning. • PG wiring error. • PG parameters (group 20) set incorrectly. • Acceleration / deceleration time set to short.	• Check load • Make sure brake is released. • Check PG wiring. • Check PG parameters 20-23/20-24. • Increase Acceleration / deceleration time.
OL1 Motor overload 	Internal motor overload protection tripped, active when protection curve 08-05 = xxx1.	• Voltage setting V/f mode too high, resulting in over-excitation of the motor. • Motor rated current (02-01) set incorrectly. • Load too heavy	• Check V/f curve. • Check motor rated current • Check and reduce motor load, check and operation duty cycle.
OL2 Inverter overload 	Inverter thermal overload protection tripped. If an inverter overload occurs 4 times in five minutes, it is required to wait 4 minutes before resetting the fault.	• Voltage setting V/f mode too high, resulting in over-excitation of the motor. • Inverter rating too small. • Load too heavy.	• Check V/f curve. • Replace inverter with larger rating. • Check and reduce motor load, check and operation duty cycle.

LED display	Description	Possible causes	Corrective action
CE (flash) communication error	No Modbus communication received for 2 sec. Active when 09-07=3.	<ul style="list-style-type: none"> • Connection lost or wire broken. • Host stopped communicating. 	<ul style="list-style-type: none"> • Check connection • Check host computer / software
	CLA over current protection level A	Inverter current reaches the current protection level A.	<ul style="list-style-type: none"> • Inverter current too high. • Load too heavy. <ul style="list-style-type: none"> • Check load and duty cycle operation.
	CLB over current protection level B	Inverter current reaches the current protection level B.	<ul style="list-style-type: none"> • Inverter current too high. • Load too heavy. <ul style="list-style-type: none"> • Check load and duty cycle operation.
Retry (flash) retry	Automatic reset activated, warning is displayed until restart delay time set (07-01) expires.	<ul style="list-style-type: none"> • Parameter 07-01 set to a value greater than 0. • Parameter 07-02 set to a value greater than 0. 	<ul style="list-style-type: none"> • Warning disappears after automatic reset.
	ES (flash) External emergency stop	External emergency stop Enabled.	<ul style="list-style-type: none"> • 03-00~03-08 set to 14, and the digital input enabled. <ul style="list-style-type: none"> • Turn off run command, and remove external emergency stop command.
	EF1 (flash) External fault (S1)	External fault (Terminal S1) Active when 03-00= 25, and Inverter external fault selection 08-24=2.	<ul style="list-style-type: none"> • Multifunction digital input external fault active and parameter 08-24 = 2 for operation to continue.
	EF2 (flash) External fault (S2)	External fault (Terminal S2) Active when 03-01= 25, and Inverter external fault selection 08-24=2.	
	EF3 (flash) External fault (S3)	External fault (Terminal S3) Active when 03-02= 25, and Inverter external fault selection 08-24=2.	
	EF4 (flash) External fault (S4)	External fault (Terminal S4) Active when 03-03= 25, and Inverter external fault selection 08-24=2.	
	EF5 (flash) External fault (S5)	External fault (Terminal S5) Active when 03-04= 25, and Inverter external fault selection 08-24=2.	

LED display	Description	Possible causes	Corrective action
EF6 (flash) External fault (\$6) 	External fault (Terminal S6) Active when 03-05 = 25, and Inverter external fault selection 08-24=2.		
EF7 (flash) External fault (\$7) 	External fault (Terminal S7) Active when 03-06 = 25, and Inverter external fault selection 08-24=2.	• Multifunction digital input external fault active and parameter 08-24 = 2 for operation to continue.	• Multi-function input function set incorrectly. • Check wiring • Multi-function input function set incorrectly. • Check wiring
EF8 (flash) External fault (\$8) 	External fault (Terminal S8) Active when 03-07 = 25, and Inverter external fault selection 08-24=2.		
EF9 (flash) error of forward/reversal rotation 	Forward run and reverse run are active within 0.5 sec of each other. Stop method set by parameter 07-09.	• Forward run and reverse run active (see 2-wire control).	• Check run command wiring
SE01 Range setting error 	Parameter setting falls outside the allowed range.	• Some parameter ranges are determined by other inverter parameters which could cause an out of range warning when the dependency parameter is adjusted. Example: 1.02-00>02-01, or 20>02-21 02- 2.00-12>00-13, 3.00-07 = 1.00-05=00-06 4.02-03 > 02-06 or 02-22 > 02-25 5.20-16 < 20-15	• Check parameter setting.
SE02 Digital input terminal error 	Multi-function input setting error.	• Multi-function digital input terminals (03-00 to 03-07) are set to the same function (not including ext. fault and not used.) or ① UP/DOWN commands are not set at the same time(they must be used together). ② UP/DOWN commands (08 and 09) and ACC/DEC commands (11) are set at the same time. ③ Speed search 1(19, maximum frequency) and Speed search 2 (34, from the set frequency) are set at the same time. 03-00~03-07 set two-wire an three-wire in the same time	• Check multi-function input setting.
SE03 V/f curve error 	V/f curve setting error.	• V/f curve setting error. ① 01-02 > 01-12 > 01-06 >01-08; • (Fmax) (Fbase) (Fmid1) (Fmin) ② 01-16 > 01-24 > 01-20 > 01-22; • (Fmax2) (Fbase2)(Fmid1) (Fmin2)	• Check V/f parameters
SE05 PID selection error 	PID selection error.	• 10-00 and 10-01 set to 1(AI1) or set to 2 (AI2) • 10-29 = 1 or 2 and 10-25 = 1 allow to reverse. • 10-29 = 1 or 2 and 10-03 = 1xxx (PID output+target value)	• Check parameters 10-00 and 10-01. • Check 10-29 and 10-25. • Check 10-29 and 10-03.
HPErr Model selection error 	Inverter size setting error: Inverter size setting 13-00 does not match the rated voltage	• Inverter size setting does not match voltage class (13-00).	• Check inverter size setting 13-00.
SE07 PG card error 	Inverter PG card setting error.	• No PG feedback card installed. • Set wrong type for PM Encoder Type (22-08)	• Install PG feedback card. • Check control mode. • Set right type for PM Encoder Type (22-08) and power on again.

LED display	Description	Possible causes	Corrective action
SE08 PM Motor mode error 	Inverter rating does not support the PM Motor mode.	<ul style="list-style-type: none"> Inverter rating does not support PM motor control mode. 	<ul style="list-style-type: none"> Check control mode.
SE09 PI setting error 	Inverter PI setting error	<ul style="list-style-type: none"> Inverter pulse input selection (03-30) selection conflicts with PID source (10-00 and 10-01). 	<ul style="list-style-type: none"> Check pulse input selection (03-30) and PID source (10-00 and 10-01).
FB (flash) PID feedback braking 	PID feedback signal falls below level specified in 10-12 (PID feedback loss detection level) for the time specified in 10-13 (Feedback loss detection time). Active when parameter (10-11 = 1).	<ul style="list-style-type: none"> Feedback signal wire broken Feedback sensor broken 	<ul style="list-style-type: none"> Check feedback wiring Replace feedback sensor.
USP (flash) Unattended Start Protection 	Unattended Start Protection (USP) is enabled (enabled at power-up.)	<ul style="list-style-type: none"> USP at power-up (activated by multi-function digital input) is enabled. The inverter will not accept a run command. While the warning is active the inverter does not accept a run command. (See parameter 03-00 - 03-08 = 50). 	<ul style="list-style-type: none"> Remove run command or reset inverter via multi-function digital input (03-00 to 03-07 = 17) or use the RESET key on the keypad to reset inverter. Activate USP input and re-apply the power.
STP0 Zero Speed Stop Error 	Frequency command is smaller than 01-08 without DC brake.	<ul style="list-style-type: none"> Frequency command is smaller than motor minimum output frequency. 	<ul style="list-style-type: none"> Adjust frequency command
STP1 Direct Start warning 	The inverter can't start directly due to 07-04=1	<ul style="list-style-type: none"> Run command from the terminal is enabled and 07-04=1. 	<ul style="list-style-type: none"> Remove the run command from the terminal first, and enabled later
STP2 External Terminal Stop Error 	External Terminal is main run command source selection (00-02=1) and run command executes but executes stop command from keypad.	<ul style="list-style-type: none"> Run command executes from external terminal but executes stop command from keypad. 	<ul style="list-style-type: none"> Remove the run command from external terminal
EnC Encoder Error 	PG card is connected but encoder signal error is detected when motor auto rotational tuning is running.	<ul style="list-style-type: none"> Abnormal encoder signal 	<ul style="list-style-type: none"> Check encoder wiring 17-07 PG pulse number setting is not corresponding to the encoder. Replace the encoder.
RunEr Wrong running direc- tion Error 	Running direction is different from 11-00	<ul style="list-style-type: none"> Check the command among 11-00, jog and DI control to see if any difference. 	<ul style="list-style-type: none"> Revise the command among 11-00, jog and DI control to see if any difference
PArEr Parameter setting error 	Parameter setting error	<ul style="list-style-type: none"> The parameter setting is wrong 	<ul style="list-style-type: none"> Please refer to the manual for correct setting

LED display	Description	Possible causes	Corrective action
FirE Fire mode enabled	Fire mode enabled	• Fire mode enabled.	• Check the environment and confirm the fire status. If no fire, turn off the power and power on again.
			
AdCEr Voltage on C/B error	The voltage on the control board error	• Errors of detecting voltages • Noises too much • Control board failure	• Check the voltage on the control board.
			
EPErr EEPROM Save error	The data save in EEPROM is wrong.	• EEPROM circuit failure • Parameter check error after power on	• Restore factory setting, then cut off the power and power on again. • If warning again, replace control board.
			
bdErr Control board error	Firmware can't meet Control board.	• Firmware can't meet Control board.	• Replace the control board (Please contact Gefran Technical Assistance).
			
LOC Parameter Lock	Parameter lock key code (password) already locked	• Parameter lock key code already enable (13-07)	• Lifting the parameter lock key code, to enter the correct parameter for 13-07
			
Err2 Set password failed	Parameter lock key code cannot enable	• To enable the parameter lock key code (password) function, but the password is not correct	• Enter the correct parameter for 13-07 to enable the parameter lock key
			

5.4. Auto-tuning Error

When a fault occurs during auto-tuning of a standard AC motor, the display will show the “AtErr” fault and the motor stops. The fault information is displayed in parameter 17-11.

Note: The fault contact output does not energize with an auto-tuning fault. Refer to Table 10.4.1, for fault information during tuning, cause and corrective action.

Table 10.4.1 Auto-tuning fault and corrective actions

Error	Description	Cause	Corrective action
01	Motor data input error.	<ul style="list-style-type: none"> Motor Input data error during auto-tuning. Inverter output current does not match motor rated current. 	<ul style="list-style-type: none"> Check the motor tuning data (17-00 to 17-09). Check inverter size
02	Motor lead to lead resistance R1 tuning error.	<ul style="list-style-type: none"> Auto-tuning is not completed within the specified time 	<ul style="list-style-type: none"> Check the motor tuning data (17-00 to 17-09).
03	Motor leakage inductance tuning error.	<ul style="list-style-type: none"> Auto-tuning results fall outside parameter setting range. 	<ul style="list-style-type: none"> Check motor connection. Disconnect motor load.
04	Motor rotor resistance R2 tuning error.	<ul style="list-style-type: none"> Motor rated current exceeded. 	<ul style="list-style-type: none"> Check inverter current detection circuit and DCCTs.
05	Motor mutual inductance Lm tuning error.	<ul style="list-style-type: none"> Motor was disconnected. 	<ul style="list-style-type: none"> Check motor installation
07	Deadtime compensation detection error		
06	Motor encoder error	<ul style="list-style-type: none"> PG feedback noise 	<ul style="list-style-type: none"> Check motor rated current. Check PG card grounding.
08	Motor acceleration error (Rotational type auto-tuning only).	<ul style="list-style-type: none"> Motor fails to accelerate in the specified time (00-14 = 20sec). 	<ul style="list-style-type: none"> Increase acceleration time (00-14). Disconnect motor load
09	Other	<ul style="list-style-type: none"> No load current is higher than 70% of the motor rated current. Torque reference exceeds 100%. Errors other than ATE01~ATE08. 	<ul style="list-style-type: none"> Check the motor tuning data (17-00 to 17-09). Check motor connection.

5.5. PM Motor Auto-tuning Error

When a fault occurs during auto-tuning of a PM motor, the display will show the “IPErr” fault and the motor stops. The fault information is displayed in parameter 22-18.

Note: The fault contact output does not energize with an auto-tuning fault. Refer to Table 10.5.1, for fault information during tuning, cause and corrective action.

Table 10.5.1 Auto-tuning fault and corrective actions for PM motor

Error	Description	Cause	Corrective action
01	Magnetic pole alignment tuning failure (static).	<ul style="list-style-type: none"> Inverter output current does not match motor current. 	<ul style="list-style-type: none"> Check the motor tuning data (22-02). Check inverter size
02	PG option missing.	<ul style="list-style-type: none"> Magnetic pole cannot be aligned without PG option card. 	<ul style="list-style-type: none"> Install PG feedback card.
03	Magnetic pole alignment auto-tuning abort during rotational auto-tune.	<ul style="list-style-type: none"> System abnormality during magnetic pole alignment. 	<ul style="list-style-type: none"> Check for active protection functions preventing auto-tuning.
04	Timeout during magnetic pole alignment during rotational auto-tune.	<ul style="list-style-type: none"> Motor cannot rotate 	<ul style="list-style-type: none"> Check motor. Check motor wiring. Check brake released.
05	Circuit tuning time out.	<ul style="list-style-type: none"> System abnormality during circuit tuning. 	<ul style="list-style-type: none"> Check for active protection functions preventing auto-tuning.
06	Encoder error	<ul style="list-style-type: none"> PG feedback noise 	<ul style="list-style-type: none"> Check motor rated current. Check PG card grounding.
07	Other motor tuning errors.	<ul style="list-style-type: none"> Other tuning errors. 	<ul style="list-style-type: none"> Check the motor tuning data (22-02). Check motor connection
08	Motor current out of range during magnetic pole alignment (rotational auto-tune).	<ul style="list-style-type: none"> Motor cannot operate at low speeds. 	<ul style="list-style-type: none"> Check PG card wiring Check motor connection.
09	Current out of range during circuit tuning.	<ul style="list-style-type: none"> Inverter output current does not match motor current. 	<ul style="list-style-type: none"> Check the motor tuning data (22-02). Check inverter size
10	Magnetic pole alignment and circuit tuning failed.	<ul style="list-style-type: none"> Auto-tuning is not successful. 	<ul style="list-style-type: none"> Retry magnetic pole alignment and circuit tuning.
